Camera Armor welcomes new waterproof protection solutions

Extending the protection for all photographers in action!

The **Seattle series** from **Camera Armor™** provides waterproof protection for camera gear while on the move.

Whether photographers are hiking the rain-forests of Perú, sailing the San Juans, kayaking the sounds of New Zealand or riding an adventure bike through Tasmania, the **Seattle series** of dry camera bags will provide valuable camera protection from extreme wet weather conditions.

Planned for the photo enthusiast keen on outdoor pursuits, fishing, kayaking, rainforest bushwalks are all welcomed! The new range is designed to keep precious camera gear protected from all the elements.

There are two styles available: the **Seattle Sling** (sling backpack) and the **Seattle Solo** (toploader camera bag).

With no zippers, the **Seattle series'** proven dry bag technology works every time – just roll three times and secure in place – keeping dirt, dust, sand and water on the outside. Both styles are fitted with a padded inner box for impact protection and feature quick access so no shot is ever missed.

The Seattle Sling dry bag RRP \$189.00

- Carries 1 camera body, 3 lenses, flash and battery charger
- Wide-mouth, easy-access, roll-top dry bag design
- Messenger style “swing-around” design allows quick gear retrieval
- Lumbar and back padding
- Quick-release stabilising strap secures bag during strenuous activity

The Seattle Solo dry bag RRP \$89.00

- Watertight transport for 1 camera body and 2 lenses
- Convenient external accessory storage
- Adjustable, padded shoulder strap
- Carrying handle
- Elastic shock cord for gear storage
- Padded belt loop for comfortable hip carrying

Availability

Instore from **July 2009** at all good photographic retail outlets.

About Camera Armor™

Camera Armor is mostly known for its rugged, lightweight skin, moulded from specially engineered silicone that fits your camera like a glove. The precise fit helps protect your camera from everyday bumps, abrasion, dust and fingerprints, while allowing full access to all controls, compartments and ports. While you're busy capturing great images, **Camera Armor** is doing its job: **protecting your camera.**
